DETAILED ACTION

Election/Restrictions

1. Applicant's election of claims 1-30 in the reply filed on 8/16/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13, 15-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Kwarizadeh et al. USPN 5903222.

As to claims 1 and 11, Kwarizadeh discloses a wetness monitoring system 10, 20, 40, comprising a sensor, conductors, absorbent material 18 extending between the conductors, a data collector comprising a compiling processor 92, electric circuit 14,24, communication device 89, and power source (col. 9, lines 2-24). The system further comprises a control station having a receiver 89, control processor 82, and an associated memory containing a predetermined wetness value (col. 6, line 8 through col. 7, line 27). Kwarizadeh discloses the sensor is to be used with a diaper worn by the individual (col. 3, lines 39-42).

As to claims 2-10 and 12, the limitations are directed to an intended use of the article. Intended use must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963). If the prior art structure is capable of performing the intended use, then it meets the claim limitations.

As to claim 13, see col. 3, lines 60-65.

As to claim 15, see col. 3, lines 60-65, where the sensor is removed and attached to another dry garment. Thus, the sensor inherently has a fastener to enable it to be attached to the garment.

As to claim 16, see col. 5, lines 45-60.

As to claims 17 and 18, see Figures 1 and 2.

As to claim 19, see col. 13, lines 9-16.

Allowable Subject Matter

4. Claim 14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 20-30 are allowed. The following is a statement of reasons for the indication of allowable subject matter: The overall claimed combination of a method of detecting wetness comprising the steps of using a sensor to detect wetness values, collecting data from the sensor, periodically generating and transmitting wetness measurement data, comparing the data with a predetermined value, in combination with the claimed apparatus is neither anticipated nor rendered obvious by the prior art of record.
